Features When compared to other CAD packages, AutoCAD is unique in that it is a CAD application. These features make AutoCAD more powerful than other applications. Drawing types AutoCAD is a CAD program; that is, it can be used to draw three-dimensional (3D) models of any design. AutoCAD is equally capable of working with standard 2D drafting and construction drawings (2D). It can also combine 2D and 3D data, making it easy to compare dimensional drawings. This is known as drafting with dimensioning (DWd). A DWd drawing can be converted to a 3D drawing. Another drawing type that can be created in AutoCAD is a BIM or Building Information Model. AutoCAD can be used to create these drawings in the same way as a DWd drawing. Because they contain 3D information, they can be viewed from various angles (in 3D) and printed. BIM drawings are commonly used for real estate purposes. They are also used in the construction industry, as well as the infrastructure and building planning industry. AutoCAD can create AutoLISP code for BIM using the LISP subroutines. AutoCAD is also capable of working with line and polyline objects (LPs), which are suitable for editing geometric objects such as circles, arcs, rectangles and circles. LP objects are particularly suitable for drafting, because they can be moved and rotated. Shading One of the most powerful tools available in AutoCAD is the ability to shade (also known as lighten or darken) the parts of a drawing that are not clearly visible. Objects can be defined as either transparent or opaque. For example, an opaque object would have no visible edges or faces, whereas a transparent object would be partially visible through it. An opaque object would be useful, for example, when you want to render a 3D model in 2D. An opaque object would also be useful for hiding information from the user. You can shade opaque objects at any time or at design time. Shading is ideal for both 2D and 3D work. You can shade any area of the drawing by selecting the shading feature. A set of guides (also called light guides) will be displayed along with the shading feature. The user can shade in any colour. Object-editing In
