This is the process of first heating or "treating" a mold to a temperature well above its glass transition temperature to first, soften or melt the mold and then, forcing the softened mold into contact with a molding surface, to cause the softened material to flow into the mold and cool. The product may then be ejected from the mold. After an appropriate cooling time, the mold is opened and the product removed. Depending on the specific polymer being molded, mold temperatures from about 150° F. (60° C.) to about 400° F. ca3bfb1094
