Programming interfaces AutoCAD uses either the AutoLISP or Visual LISP programming language. The AutoLISP programming language is based on the AutoCAD's object-oriented programming language, and is similar to Visual Basic. The AutoLISP API includes approximately 130 functions that manipulate the geometric and attributes of AutoCAD drawing objects. A subset of AutoLISP, Visual LISP, and AutoLISP/Visual LISP is available to users who have an active subscription to AutoCAD or Animate. The Visual LISP interface can be used in AutoCAD and Microstation, while the AutoLISP interface can be used in AutoCAD only. The Visual LISP interface can be used in AutoCAD and Microstation. The AutoLISP language is preferred for its ease of use, as compared to Visual LISP, which is more of a niche language with fewer features. AutoLISP can be used for more than just CAD work, including AutoCAD programming, data conversion, 3D graphics, and animation. The new Visual LISP API is based on Windows and Linux. In February 2011, the Visual LISP API was renamed to AutoLISP; Visual LISP is no longer supported by Autodesk. The Visual LISP API can be used in AutoCAD only. Visual LISP and AutoLISP can be used for real-time 3D applications. Visual LISP is also used to develop other software applications. AutoLISP programming is not essential to AutoCAD. The language is included to make programming easier for AutoCAD and other CAD programs, and is not needed for everyday work in AutoCAD. Some users find it easier to program in AutoLISP. For writing custom AutoCAD applications, Visual LISP can be used in AutoCAD only. AutoLISP can be used for writing VBA macros in AutoCAD only. Visual LISP can be used in AutoCAD, Autodesk 3ds Max, and Autodesk Maya. AutoCAD Visual LISP programming is similar to programming using object-oriented programming techniques. AutoLISP is not object-oriented. AutoLISP programming supports dynamic arrays, including dictionaries, lists, graphs and tree data structures. The.NET ca3bfb1094
